WHO ARE WE?

Partner in your global growth

FACS Lube stands at the forefront of the chemical manufacturing industry, operating from a cutting-edge, fully automated ISO 9001:2015 certified facility. Specializing in high-performance products, aerosols, lab chemicals, analytical grade chemicals and an extensive range of auto care solutions. We cater to the dynamic needs of the Automotive, Industrial, Chemical and Transportation sectors. Our unwavering commitment to quality and innovation has established us as a preferred supplier to major OEMs and global companies in India.

ONE PARTNER.

Complete Manufacturing Excellence.

With specialized in-house R&D labs, a veteran team from the Elvi Group, and a comprehensive "Mind to Market" approach, FACS offers unmatched innovation and expertise as your dedicated partner in manufacturing comprising fully-automated & modernized machinery with a running production of 6 cans per second* and can develop, test, and distribute any new product from its portfolio in 45 days lead time.

R&D Excellence

Our advanced in-house R&D centers are a hub of innovations where our experienced scientists develop and refine customised formulations tailored to your brand's specific needs. We stay ahead of industry trends with a commitment to innovation ensuring effective products, safe and competitively formulated.

State-of-the-Art Manufacturing

Experience the cutting edge efficiency of our modern, automated and ISO certified production facility. Located in Gujarat, our state of the art manufacturing plant is equipped with latest technology, enabling us to produce high quality products at scale.

Mind to Market Solutions

From initial product concept to final delivery, we offer comprehensive end to end private label solutions. Our seamless integration of formulation, production, quality assurance, and logistics allows us to take your product from the lab bench to market shelves efficiently.

INDIA'S MOST COMPREHENSIVE Private Label Manufacturing Platform

real-world performance trials

End-to-End Brand Launch

From concept & formulation
to packaging, production & distribution

R&D → FORMULATION → PACKAGING → MANUFACTURING → DISTRIBUTION

**Trusted by Global OEMs & Emerging Brands
for Scalable, Reliable Manufacturing**

Manufacturing Excellence At Scale

FACS operates from a large, fully automated manufacturing facility designed to support high-volume production without compromising consistency or quality. The plant is engineered with modern process controls, dedicated quality checkpoints, and flexible production lines capable of handling a wide range of product formats and pack sizes.

Our infrastructure supports diverse manufacturing requirements — from aerosols, liquid bottle filling, pouch filling, tube filling to cleaning agents, polishes, paints, speciality lubricants, industrial greases and specialty chemicals — allowing brands to scale efficiently while maintaining predictable performance across batches and markets.

Built For Consistency, Speed, And Reliability

Automation and process discipline form the backbone of FACS' manufacturing operations. Multi-shift production capability, standardized operating procedures, and in-line quality controls ensure dependable output even at scale. Each production run is supported by documented quality checks and traceability systems, enabling repeatability and compliance across domestic and global supply chains.

This combination of modern infrastructure and execution rigor allows FACS to meet demanding timelines while delivering products aligned with international benchmarks.

MADE IN INDIA FOR THE WORLD

R&D EXCELLENCE AND INNOVATION PHILOSOPHY

At FACS, research is not a support function — it is the foundation of every product we manufacture. Our in-house R&D laboratories play a central role in developing formulations that balance performance, reliability, compliance, and scalability across automotive and industrial applications.

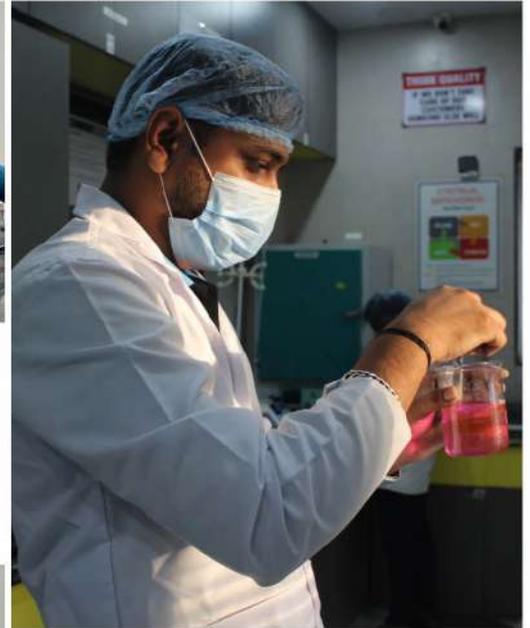

Every formulation developed at FACS undergoes rigorous testing beyond laboratory environments. Products are validated through real-world application trials across workshops, fleets, and demanding industrial settings to ensure safety, durability, and repeatable performance.

By focusing on formulation science rather than surface-level differentiation, FACS ensures that every product is engineered to perform consistently under real-world operating conditions.

QUALITY SYSTEMS & CERTIFICATIONS

At FACS, quality is embedded across every stage of manufacturing — from formulation and sourcing to production and dispatch. Our operations follow structured quality management systems aligned with globally recognized standards, ensuring consistent performance, safety, and compliance across product categories and markets.

FACS operates under an ISO 9001:2015 certified quality management framework, supported by documented procedures, internal audits, and continuous improvement practices. Each production run undergoes multiple in-process and post-production quality checks to ensure products meet defined technical and performance specifications.

In addition to formal certifications, our quality philosophy emphasizes traceability, documentation discipline, and adherence to regulatory and customer-specific requirements — supporting both domestic and international market readiness.

Rather than relying on post-production inspection alone, FACS integrates quality controls directly into manufacturing processes, enabling early detection, corrective action, and dependable batch-to-batch consistency.

- **ISO 9001:2015 Certified Quality Management System**
- **In-house Quality Control & Testing Laboratories**
- **Structured Internal Audits & Line QA Systems**
- **Batch Traceability & Documentation Protocols**
- **Compliance with OEM and regulatory requirements**

CHEMISTRY
for smooth performance

BUILT AS A PARTNER. NOT JUST A MANUFACTURER.

FACS was created to simplify the complexity involved in launching and scaling automotive and industrial chemical brands. Unlike conventional manufacturers, we operate as a collaborative partner — aligning research, production, quality, and logistics teams around a shared objective: predictable, high-quality outcomes.

Our engagement model is designed to reduce friction, shorten development timelines, and provide partners with clarity and control at every stage of the manufacturing process.

PRIVATE LABELLING & PARTNERSHIPS

At FACS, manufacturing is approached as a partnership rather than a transaction. We work closely with our customers to understand application requirements, market expectations, and performance goals before translating them into robust, repeatable products. This collaborative approach enables faster development cycles, predictable outcomes, and long-term value creation for our partners.

With modern infrastructure, disciplined quality systems, and an experienced technical team, FACS serves as a single-point solution for brands seeking dependable manufacturing excellence — from concept through commercialisation

***High-performance products are not discovered.
They are engineered, tested, and refined.***

A BROAD PORTFOLIO & CATEGORY ECOSYSTEM Designed to Support Multi-Category Growth

From high-performance auto care solutions to specialized industrial chemicals, FACS' portfolio is structured to address a wide range of applications and operating environments. Our manufacturing systems are designed to accommodate varying formulations, pack formats, and performance requirements while maintaining predictable outcomes across categories.

This flexibility allows partners to respond quickly to market opportunities, introduce adjacent products, and expand into new segments without compromising reliability or control.
